HOWARD SIMONS
ASSISTANT MANAGING EDITOR

Josh:

I enjoyed today's lunch.

I trust things went well at the Academy and am sorry I missed you later.

Perhaps when you come again we can have dinner together. Let me know.

Enclosed is another comment on XYY which just arrived in this afternoon's mail.

Regards,

Howard

A Thank you, Howard. Yes all went well. John R. gave me a rough time pulling apart my piece on Goddard, but I don't mind that; to the contrary.

In the evening I talked ~~xxxxxx~~ at a PAHO/WHO 20th anniversary. There may even be some ways that molecular biology can be useful in world health-- but no one will do anything about it for another 20 years: viruses for mosquito control; more imaginative breeding of crop plants; fertility control etc. You will undoubtedly see some of this crop ~~up~~ in future columns.

I was interested to see the the XYY report. Many people have forgotten Hauschka's very first case, who~~xx~~ was unbelievably "normal", IQ= 100 etc.

It was a superb lunch.

Yours

Josh

P.S. Anything further on the NY Daily Column?
